

Highfield Level (3) International Award in Environmental Awareness

Who is Highfield Level 2 Environmental Awareness for?

This programme is aimed at general staff, personnel who are involved in the Environmental Management System, environmental officers, and specialist, HSE personnel, supervisors, and managers.

What will they get out of it?

The aim of this program is to impart a fundamental understanding of environmental aspects, issues, and their importance to industries. Participants will build a strong foundation in key environmental concepts, including sustainability and ecological balance, while also delving into the ways industries impact the environment and the potential for sustainable practices

What is Highfield Level 2 Environmental Awareness covers?

- Principles of natural systems and distinct roles in the study of natural systems
- Understand the concept of biodiversity, including its levels, importance, and the ecological significance of preserving it
- The international environmental celebrations and appreciate the significance of environmental celebrations in promoting awareness and positive action for environmental conservation
- The different Natural Global Phenomena and their causes and impacts.
- The relationship between environmental sustainability and business, including how businesses can contribute to environmental well-being
- The environmental challenges and solutions associated with various industries, promoting responsible industrial practices
- The environmental aspects and their potential impact, enabling informed decisions on mitigating environmental consequences
- The contemporary environmental issues, their root causes, and the potential strategies to address them.
- The principles and practices of environmental management, including compliance with regulations and the role of management systems in sustainability efforts
